

SuperN 10-3-0.3

Organically Sourced Seed-Placed Fertility Pellet

SuperN is an organically sourced, seed-placed fertility pellet engineered to deliver high-nitrogen nutrition to grain crops from a single application at seeding. Blood meal delivers a fast nitrogen flush at establishment while feather meal provides sustained slow-release nitrogen through to grain fill. BSFL frass activates soil biology and plant immune response through chitin. Biochar creates permanent microbial habitat in the seed row. Zeolite and calcium bentonite retain ammonium in the root zone, reducing volatilization and leaching on alkaline prairie soils.

Input sourcing

FORMULA COMPOSITION
Derived from organically sourced and naturally mined inputs. SuperN separates its nitrogen and biology roles deliberately. Blood meal and feather meal carry the nitrogen program. BSFL frass carries the biological activation program. Each ingredient does one job and does it well.

- Fast nitrogen:** Blood meal
- Slow nitrogen:** Feather meal
- Biological activation:** BSFL frass (chitin, soil biology)
- Phosphorus and calcium:** Bone ash
- Microbial habitat:** Biochar
- Retention and buffering:** Zeolite, calcium bentonite

GUARANTEED ANALYSIS	
Total Nitrogen (N)	10.2%
Available Phosphate (P ₂ O ₅)	3.4%
Soluble Potash (K ₂ O)	0.3%
Calcium (Ca)	3.4%
Magnesium (Mg)	0.2%
Sulfur (S)	1.0%

TWO-PHASE NITROGEN RELEASE

- HOW IT WORKS**
- Nitrogen phase 1 W1-4** Blood meal releases fast-available nitrogen immediately at germination, supporting rapid early establishment and tillering.
- Nitrogen phase 2 W4-16** Feather meal hydrolysis accelerates with rising soil temperatures, delivering sustained nitrogen through stem extension and grain fill. Zeolite retains ammonium in the root zone.
- Biology W1 onward** BSFL frass chitin activates phosphorus solubilizing bacteria and plant immune response independently of the nitrogen program. Biochar provides permanent microbial habitat in the seed row.

APPLICATION	
Crops	Wheat, triticale, barley, oats, rye, pea-cereal polycrop
Method	Seed-placed or in-furrow at seeding
Rate	40-60 lbs per acre — single application
pH range	Best performance at pH 6.0-7.5
Advisory	On soils above pH 7.5, use 40 lbs/ac max. Always refer to a current soil test to determine application rate and identify any additional nutrient requirements specific to your field.

INPUT SOURCING
SuperN is formulated using 100% organically sourced inputs. Blood meal is organically sourced but not certified organic. This product is not suitable for certified organic operations. For certified organic use see SuperN Certified.

STORAGE AND HANDLING
Store cool and dry, away from direct sunlight. Keep sealed when not in use. Compressed pellet format, do not expose to prolonged moisture prior to application. Shelf life 24 months in original packaging.

ABOUT TERRA PRETA AG
Terra Preta Ag builds soil fertility products grounded in soil biology and ecological function. We work directly with organic and organic-adjacent grain producers in Alberta and Saskatchewan to close the nutrient gaps that limit yield and soil health.
